

## MB7-A02

Email field character limit is 255 instead of 40.

**Status:** In progress

**Priority:** Low

**Issue Type:** Validation

**Frequency:** 100%

**Linked to:** MB7-C23

**Product Version:** MrBuggy 7 version 1.0.0.1

**Environment:** Windows 10 Pro, i7-4712MQ, 8GB RAM

**Author:** Jan Kowalski

**Assignee:** Adam Nowak

**Date:** 15.08.2022, 13:25

### Actions performed:

1. Enter admin level authorisation credentials.
2. Start creating a new user of any access level by POST user/TYPE request.
3. Enter mail address to the "email" field with valid structure (x...x@x...x.xx) with length between 41 and 255 characters including.
4. Send the request and observe application response.

### Expected result:

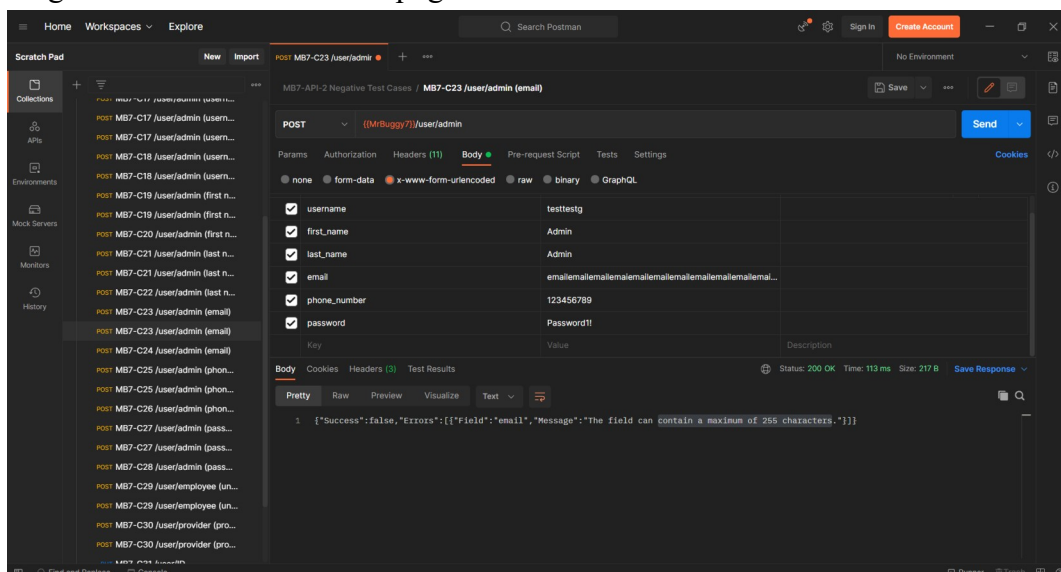

Application should reject request with mail address longer than 40 digits.

### Actual result:

Application accepts new user with mail over 40 digits, stating that the limit is 255 digits. There is an inconsistency between product specification document and implemented validation methods.
