Actions performed:

1. Enter authorisation credentials of any access level.
2. Create request addressed at any valid resource with invalid HTTP method (i.e. POST /user).
3. Send the request and observe response's status code.

Expected result:

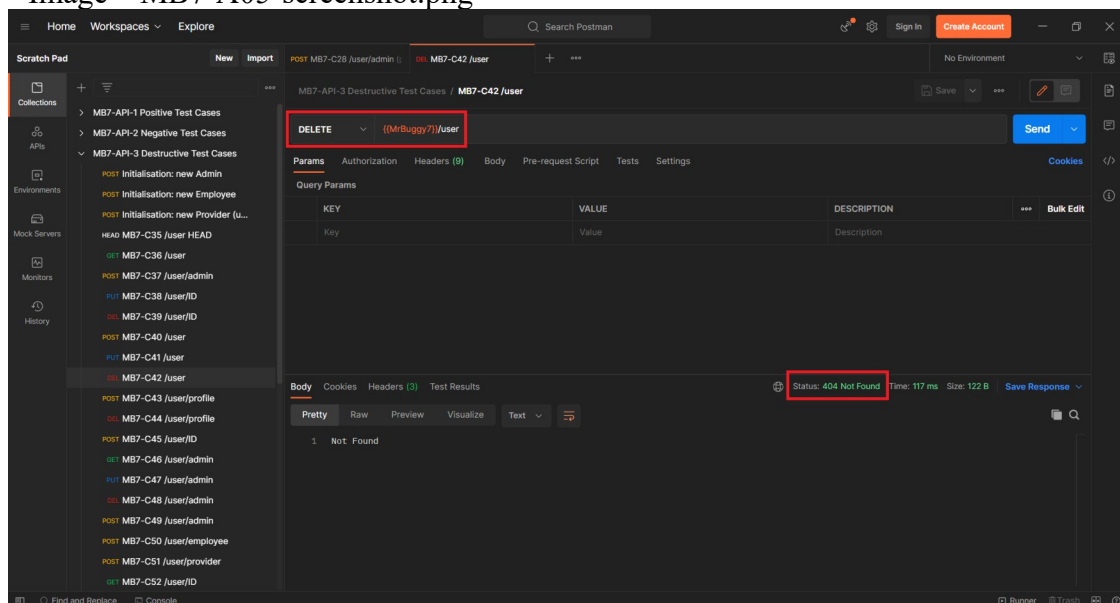

Application should return 405 Method Not Allowed response code for invalid resource/method combination.

Actual result:

Application returns 404 Not Found code, which may reduce the clarity of the API.
