

MB7-A03

Password validation in API is inconsistent with the specification document.

Status: In progress

Priority: Medium

Issue Type: Validation

Frequency: 100%

Linked to: MB7-C28, MB7-E03

Product Version: MrBuggy 7 version 1.0.0.1

Environment: Windows 10 Pro, i7-4712MQ, 8GB RAM

Author: Jan Kowalski

Assignee: Adam Nowak

Date: 15.08.2022, 13:25

Actions performed:

1. Enter admin level authorisation credentials.
2. Start creating a new user of any access level by POST user/TYPE request.
3. Enter the password with following attributes: 4 lowercase characters, 1 special character, 1 number.
4. Send the request and observe application's response.

Expected result:

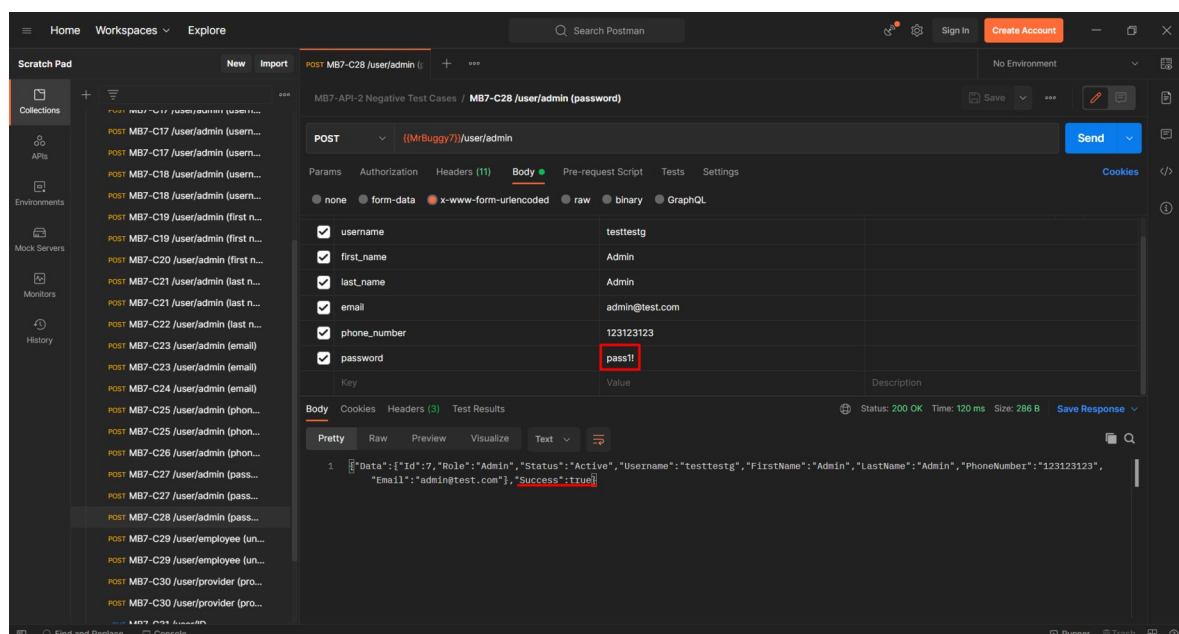

Application should reject request with password shorter than 8 digits and without any capital letters.

Actual result:

Application accepts new users with password shorter than 8 digits and without any capital letters. There is an inconsistency between product specification document and implemented validation methods.
